Education

- **Faculty of Computing and Artificial Intelligence - Cairo University** Giza, Egypt
Bachelor of Computing and Artificial Intelligence; GPA: 2.98 Sep 2024 - Present
Expected Graduation: July 2028

Experience & Training

- **Digital Egypt Pioneers Initiative (DEPI) – MCIT** Remote
AI & Data Science – Microsoft Machine Learning Engineer Trainee Aug 2026 – Present
 - Enrolled in an intensive professional track covering Machine Learning, Deep Learning, NLP (Attention Models), and Computer Vision.
 - Training on cloud-based AI solutions using Microsoft Azure (Azure AI Associate), MLOps pipelines (MLflow), and Hugging Face models.
- **Information Technology Institute (ITI) & NVIDIA DLI** Remote
Generative AI Trainee (35 Hours) Feb 2026 – Mar 2026
 - Completed NVIDIA DLI training focusing on Generative AI architecture, Prompt Engineering, and RAG pipelines.
 - Built and augmented LLM application workflows using Python and modern GenAI frameworks.

Technical Skills

- **Languages:** Python, C++, Java, JavaScript
- **Frontend:** Html, CSS
- **Backend:** Django, Microsoft SQL Server, SQL, SQLite
- **Concepts:** OOP, Data Structures, Algorithms, SOLID Principles, APIs, AJAX
- **Tools:** Git

Projects

Maktaba - Full-Stack Library Management System (Django, APIs, AJAX) [🔗 Link to Repo](#)

- Built a full-stack library system, linking a custom dashboard to a Django backend via JSON APIs and AJAX.
- Engineered the relational database schema and implemented a custom user model for email authentication.
- Authored an automated data-seeding script to parse, transform, and migrate legacy JSON records into the database.

Wafarly Shokran - Full-Stack Personal Finance System (Django) [🔗 Link to Repo](#)

- Built a full-stack financial tracker with a clean UI, enabling seamless CRUD operations for user transactions.
- Developed a Django backend using ORM queries to dynamically monitor budgets and savings goals.
- Implemented an automated SMTP email alert system to notify users when spending exceeds 80% of limits.

Object-Oriented Board Games Implementation (C++, OOP) [🔗 Link to Repo](#)

- Implemented game logic for Ultimate Tic-Tac-Toe and similar games using a provided base engine.
- Applied OOP principles to extend classes and manage game rules and states.

Image Processing Editor "Baby Photoshop" (C++, Algorithms) [🔗 Link to Repo](#)

- Built a desktop app for loading and manipulating images, focusing on efficient memory management.
- Implemented custom image processing algorithms and filters, including grayscale, blur, and edge detection.

Desktop Audio Player Application (C++, JUCE Framework) [🔗 Link to Repo](#)

- Developed a standalone desktop audio player featuring a custom GUI built with modern C++ and JUCE.
- Integrated advanced functionalities, including waveform display, playlist support, and metadata extraction.
- Applied a modular Object-Oriented Architecture to ensure a scalable and highly maintainable codebase.

Accomplishments

- **Competitive Programming:** Active participant in Codeforces contests, focusing on Data Structures and Algorithms problems using C++. [Codeforces Profile](#)
- **Egyptian Collegiate Programming Contest (ECPC) 2026:** Competed as an official university team member in Egypt's premier collegiate programming championship. Applied advanced data structures, graph algorithms, and dynamic programming using C++ to solve complex problems under strict 5-hour time constraints.
- **EME - SOLVEX Competition 2026:** Participated in a team-based problem-solving challenge organized by ITIDA - EME Innovation Labs. Applied analytical thinking and algorithmic skills using C++ to solve complex problems under time constraints on Codeforces.
